

Real-Time Costing Across Both Stages

Why Hybrid Manufacturers Can't Afford to Wait.

The Problem

- Process and discrete stages run on separate plans that are nearly impossible to align.
- True job profitability isn't known until month-end — too late to course-correct.
- Audit prep for traceability takes weeks of manual effort across disconnected records.

The Solution

Why now: Margin pressure + supply chain volatility + compliance tightening = urgent need for visibility.

Solution 1:
Real-time two-stage costing

Solution 2:
End-to-end material and capacity planning with IndustriOS APS (Powered by LOGIS)

Solution 3:
End-to-end lot/serial traceability

Unified Costing for Hybrid Manufacturers

ROI Snapshot

Item	Value
Investment	-
Year 1 savings: inventory reduction	-
Year 1 savings: On-Time Delivery improvement	-
Year 1 savings: labor efficiency	-

Quick Self-Assessment

If you answered Yes to 3 or more of the questions below, let's talk!

- Do you have a distinct process stage (forming, laminating, coating, molding) feeding a custom discrete stage?
- Do you struggle to report true job profitability across both stages in real-time?
- Do your process plan and discrete plan live apart, so upstream changes catch downstream orders by surprise?
- Are audit prep and traceability reporting manual and painful?
